EDUCATION

B.Tech in Engineering Technology
BITS PILANI – WILP, Rajasthan
2023 – 2027 (In Progress)

Post Diploma in Tool Design & Manufacturing
Central Tool Room & Training Centre (CTTC), Bhubaneswar
2014 – 2015

Diploma in Tool & Die Engineering
Government Polytechnic College, Kerala
2010 – 2013

CORE COMPLIANCE & ENGINEERING CAPABILITIES

Product & Regulatory Compliance

- ISO 13485 regulated environments
- Design controls and regulatory requirements
- Engineering governance
- Quality assurance
- Risk management and DFMEA
- Change control

Testing & Validation

- Design Verification & Validation
- Test plan development
- Validation procedures
- Technical risk assessments
- Product reliability testing support
- Design and manufacturing reviews

PROFESSIONAL PROFILE

Mechanical and product development engineer with 10+ years of experience across regulated medical devices, semiconductor inspection equipment, IoT/connected products, consumer electronics, and high-volume manufacturing.
Experienced in ISO 13485-regulated product development, design controls, regulatory compliance, risk management, verification and validation, engineering documentation, supplier coordination, and cross-functional engineering delivery.
Strong electro-mechanical product background, including coordination across Mechanical, Electrical, Software, Manufacturing, and Supply Chain teams. Proven ability to own complex engineering activities, manage schedules and risks, gather technical inputs, maintain controlled documentation, and drive engineering activities to demanding quality requirements with limited supervision.

PROFESSIONAL EXPERIENCE

Lead Mechanical Design Engineer
Zealogics Inc – Remote, UK Hours
June 2023 – June 2026

- Led the design and development of precision mechanical assemblies and subsystems for semiconductor inspection equipment supporting ASML projects within a complex electro-mechanical product environment.
- Coordinated multidisciplinary Mechanical, Electrical, Software, Manufacturing, and Supply Chain teams, translating customer and system requirements into robust engineering solutions.
- Managed multiple engineering projects covering schedules, budgets, resources, risks, and delivery milestones.

Electro-Mechanical Product Development

- Precision mechanical assemblies and subsystems
- Semiconductor inspection equipment
- Patient monitoring systems
- Medical devices
- IoT and connected products
- Consumer electronics

Compliance & Engineering Documentation

- Bills of Materials (BOM)
- Engineering Change Orders (ECO)
- Manufacturing drawings
- Assembly procedures
- Project and technical reports
- Design documentation
- Change requests

Supplier & External Coordination

- Supplier and vendor management
- Procurement support
- Supplier technical coordination
- Technical data gathering
- Manufacturing collaboration
- Customer and stakeholder communication

Project & Programme Delivery

- Project schedules and milestones
- Budget and resource management
- Technical risk management
- Cross-functional coordination
- Stakeholder management
- Independent project ownership

Manufacturing Engineering

- Design for Manufacture (DFM)
- Design for Assembly (DFA)
- Injection moulding
- Tooling and mould design
- Machining and sheet metal
- High-volume manufacturing
- GD&T – ASME Y14.5
- Tolerance stack-up analysis

- ❖ Drove engineering activities proactively to meet demanding programme, technical, and quality requirements.
- ❖ Conducted design reviews, technical risk assessments, and engineering governance activities to support product quality, verification readiness, and controlled technical decision-making.
- ❖ Prepared and maintained controlled engineering documentation including BOMs, Engineering Change Orders (ECOs), manufacturing drawings, and assembly procedures.
- ❖ Acted as the primary technical interface between customers and engineering teams, coordinating technical inputs, issue resolution, engineering requirements, and delivery status.
- ❖ Worked closely with Manufacturing and Supply Chain functions to resolve engineering and supplier-related issues.
- ❖ Mentored junior engineers and supported engineering capability development within the team.
- ❖ Improved cross-functional collaboration and technical review processes, supporting efficient project execution.

Senior Associate Design Engineer – Medical Devices
Cyient Ltd, Hyderabad
February 2022 – June 2023

- ❖ Delivered medical device development projects for Philips Healthcare Patient Care Monitoring products within an ISO 13485-regulated environment.
- ❖ Supported regulatory compliance through design controls, risk management, DFMEA, DFM reviews, design verification, and validation activities across the product lifecycle.
- ❖ Worked within regulated product-development processes to ensure engineering activities complied with applicable quality and regulatory requirements.
- ❖ Contributed to the development of single-use medical devices, including syringes and face shields.
- ❖ Supported patient monitoring system projects through detailed mechanical engineering,

Engineering Software

- SolidWorks
- Siemens NX
- FEA Analysis
- BOM Management
- Engineering Change Order (ECO) processes

ADDITIONAL INFORMATION

- Full UK Work Authorisation
- Eligible to relocate across the UK
- Available for UK and international travel
- Strong leadership and stakeholder-management skills
- Experienced working with multidisciplinary and geographically distributed engineering teams
- Languages: English, Hindi, Tamil, and Malayalam

RELEVANT STANDARDS & REGULATED ENVIRONMENTS

- ISO 13485 – Medical Device Quality Management Systems
- Design Controls
- Design Verification & Validation
- DFMEA & Risk Management
- Engineering Change Control
- GD&T – ASME Y14.5
- Quality and regulatory compliance within medical-device product development

tolerance analysis, material selection, and design reviews.

- ❖ Generated and maintained technical engineering evidence and documentation supporting product development, verification, validation, and quality activities.
- ❖ Managed client communications, project reporting, and engineering change requests.
- ❖ Coordinated with multidisciplinary stakeholders throughout product development and validation activities.
- ❖ Supported proposal preparation and project cost estimation.
- ❖ Provided technical guidance and mentoring to junior engineers.
- ❖ Successfully delivered multiple regulated medical-device projects while maintaining quality and regulatory requirements.

Senior Associate – Mechanical Design
IDoFThings Pvt. Ltd, Cochin
September 2019 – February 2022

- ❖ Led mechanical design and product development activities for IoT, consumer, and connected technology products.
- ❖ Managed products from concept development through prototyping, testing, and design validation.
- ❖ Developed test plans and validation procedures to assess product reliability and manufacturability.
- ❖ Coordinated engineering activities through product testing, technical evaluation, and design iteration.
- ❖ Managed project schedules, budgets, procurement activities, and supplier engagement.
- ❖ Worked with suppliers to gather technical inputs, resolve product-development issues, and support prototype and manufacturing activities.
- ❖ Coordinated cross-functional engineering teams throughout product development.
- ❖ Presented technical solutions, testing progress, engineering issues, and project status to customers and internal stakeholders.
- ❖ Improved supplier coordination and prototype development efficiency while maintaining project cost and schedule targets.

Senior Mold Design Engineer
VVDN Technologies Pvt. Ltd, Gurgaon
February 2019 – August 2019

- Designed high-precision injection moulds for telecommunications and consumer electronics components.
- Applied Design for Manufacture (DFM), GD&T, and manufacturing best practices to optimise production quality and efficiency.
- Collaborated closely with manufacturing teams to resolve technical and production issues.
- Supported improvements in tooling performance, manufacturing quality, and product yield.

Mold Design Engineer / Assistant Tool Room Engineer
Divine Toolings Pvt. Ltd, Pune
November 2015 – December 2018

- Designed and validated injection moulds and tooling solutions for automotive and industrial plastic components.
- Supported manufacturing operations through troubleshooting and process optimisation.
- Participated in supplier-development activities and technical coordination.
- Worked closely with customers and production teams to ensure tooling met required performance and quality requirements.
- Supported validation of tooling and manufacturing solutions before production implementation.
